Personal Projects

Full Stack Web Developer - Eng Partner ([deploy](#))   Nov.21 - Dec. 15
 Henry Bootcamp
Collaboratively developed a web app with my team, with the purpose of bringing together different native speakers of different languages with real-time translation in the language they choose. Designing from scratch user-functionalities and admin-options as well as VIP benefits.

1. Collaborated within a team to develop and implement search and filtering features, enhancing user experience.
2. Played a key in the web app's report system, allowing users to report messages with different options
3. error-handling mechanism on the frontend to provide users with clear error messages
4. Played a key role in the implementation of a rating feature, enabling users to express feedback to the admin
5. Contributed to the design and functionality of the footer section, providing important navigation links
6. Collaborated on the development of profile features, including VIP-exclusive options, to enhance user engagement and provide tailored experiences for premium users.

Front: Vite, React, Redux, Firebase, Cloudinary, Css, React-Router-Dom, Axios, Universal cookie, UUID, Material UI
Backend: Axios, Express, Node.js, Firebase, Nodemon, Stripe, Dotenv, Vercel

Full Stack Web Developer - DogsApp ([deploy](#))
Henry Bootcamp
- Designed and developed a responsive full stack application that renders cards with combined filtering options
- Implemented combined filtering functionalities allowing users to refine displayed content.
- Integrated pagination features for enhanced user experience
- Implemented search functionality enabling users to find dogs by name
- Implemented new dog's creation with user/frontend validations

Frontend: Vite, React, Redux,, Axios, CSS Modules
Backend: Node.js, Dotenv, Express, Morgan, Pg, Sequelize and PostgreSQL on the database
