Work experience/Projects

Eng Partner (deploy)

Web developed with a team for bringing users with different languages in one place with message translation in different languages using **Firebase** features for translation and VIP benefits.

1. Collaborated within a team to develop and implement search and filtering features, Improving user experience.
2. Played a key in the web app's report system, allowing users to report messages with different options.
3. error-handling mechanism on the frontend to provide users with clear error messages.
4. Played a key role in the implementation of a rating feature, enabling users to express feedback to the admin
5. Collaborated on the development of profile features, including VIP-exclusive options to enhance user engagement
6. Fixed Broken CSS on many parts of the web and made it responsive and accessible for smaller devices by using % and relative measurements like **REM** and **EM** while implementing better **Flexbox** usage.

Front: Vite, React, Redux, Firebase, Cloudinary, Css, React-Router-Dom, Axios, Universal cookie, UUID, Material UI
Backend: Axios, Express, Node.js, Firebase, Nodemon, Stripe, Dotenv, Vercel, Github, Git

Rick and Morty app (deploy)

Responsive full stack web app with pagination made for displaying Rick and morty's characters information using The Rick and Morty API, allowing users to store their favorite character and search by using their ID.

1. Implemented a 4x4 Flexbox layout with pagination for all the cards
2. Implemented Frontend validations and display error message when in the sign in part
3. Set up redux and made petitions to the backend by using actions through redux
4. Solved multiple problems with cards related to the position of the remove and favorites button by Implementing successfully a position relative to keep the buttons inside the Card

Frontend: Vite, React, Redux,, Axios, CSS Modules, Github, Git
Backend: Node.js, Dotenv, Express, Morgan, Pg, Sequelize and PostgreSQL on the database

DogsApp (deploy)
Designed and developed a responsive RESTful full stack application that renders cards with info from The Dog API

• Implemented combined filtering functionalities allowing users to refine displayed content.
• Encountered and solve pagination issues with filters, by changing the state of pagination to the first and taking user to the first page every time a filter is used and its not on the first page
• Implemented new dog's creation with validations on it's properties in both client and server

Non-Technical Experience: Customer Service| Coral bay, Honduras March-July(2022)

- Assisted customers in regardless or their medical status to transfer calls
- Supported new team members and consistently received positive feedback from management • Worked effectively in a team utilizing strong communication skills in regardless of their calls
